

Bitutainer™ Electric Element Heater Set Complete with customised Control Panel

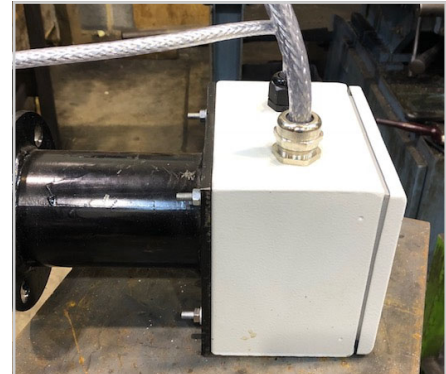

For use with TEC Transportation and Storage Bitutainers™

High Efficiency Heating Systems, Pre-Tested, Easily Installed and Ready to Use.

Features include:

- Ceramic elements for fixed storage applications provide a versatile and flexible heating solution
- Metal Rod assemblies are robust, and durable for transport tank applications where frequent handling is required
- Each system fitted with over temperature protection for elements to prevent damage to the elements or products
- PT100 Temperature probe to supply temperature sensing within the Bitutainer™, providing constant feedback to the control panel to prevent overheating.
- Electric elements offer high efficiency for maintaining temperature in comparison to direct fire heating

- Ideally suited for applications where product temperature control is important and a gradual heat up is required
- Control Panel is fitted with an internal time switch for automatic heating as well as a digital controller for programming pre-set temperatures.
- Level sensing integration options available
- Units can be adapted to meet local power supply requirements.
