

SMALL SCALE STORAGE FACILITY

≈150 TONNE CAPACITY

The Bitutainer™ Storage Facility is a flexible solution to bulk bitumen storage and delivery, designed to combat current supply chain issues in an increasingly unpredictable and fast moving market.

Fast Turnaround Time

Simple Installation

Modular Design

HEATING

Immersed heater tube systems designed for high efficiency heat transfer. Electric, Direct Fire Burner and Thermal Oil options available.

MOBILE PUMP SOLUTION

This simple transfer pump skid offers full flexibility in operations, filling the Bitutainer™ facility from low level.

INSTRUMENTATION & CONTROL

A range of sensing equipment can be integrated to give operators full visibility and control of the tank condition e.g. level, temperature, pressure etc.

MEST BITUTAINER™

Can be used to act as the 'mother' tank in a series, complete with it's own pump, level and control system housed within the recessed area.

ACCESS

Easy to install access options, compliant with safety standards for operator safety.

SECONDARY CONTAINMENT

The Bitutainer™ range features a self-contained double walled design reducing the need for bund walls and featuring insulation for optimal thermal efficiency.

LOADING ARM

A retractable loading arm protrudes from the MEST to fill awaiting trailer tankers safely and efficiently without the need for operator access.
